

Care of Partial or Full Dentures

Clean your denture with cool soapy water **only**.

It is recommended to clean your denture with an ultrasonic cleaner and cool soapy water or some hydrogen peroxide – water (50-50) mixture.

Do not use hot water as this may distort the denture.

Do not soak the denture in mouthwash or hot water.

Do not place in direct sunlight or any excessively warm area such as a window sill. This can cause distortion of the denture material.

Do not use toothpaste or a stiff brush. This will cause surface scratches and discoloring of the denture.

When the denture is not in use, be sure it is in a denture case! They are often thrown away if placed in a paper towel or other wrap.

Keep away from pets! Family pets love to chew on these dentures.

If your denture becomes loose, tight, or causes you discomfort, please contact our office immediately.
